

01. TITLE & VISION

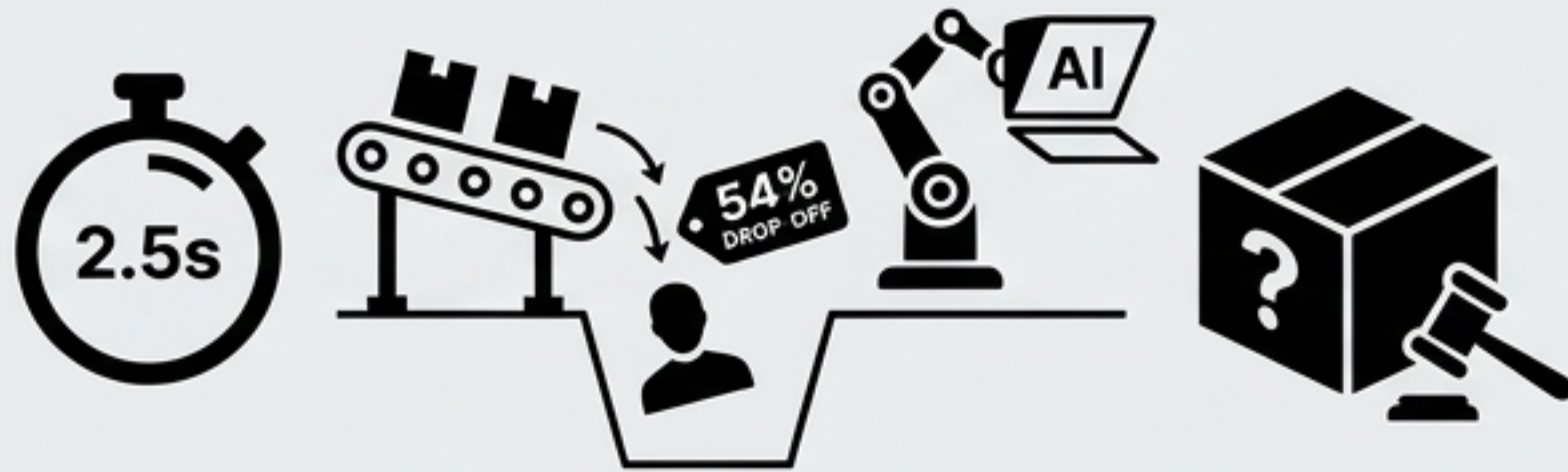

VERITY

Resumes make claims. Verity checks them, out loud.

02. PROBLEM STATEMENT AND APPROACH

THE 2.5-SECOND MONOLOGUE TRAP

Cold 1-way recorded videos yielding a 54% candidate drop-off rate.

Scripted question banks instantly defeated by off-screen AI teleprompters.

Unjust, unauditable black-box percentage scores exposing enterprises to legal liability.

THE SOCRATIC INVESTIGATION

Every technical claim is treated as an active, independent case file.

3 competing hypotheses mapped: Owned, Contributed, or Surface.

Verity dynamically drafts the exact question to separate tied hypotheses, leaving an immutable audio receipt.

03. FEASIBILITY

01 | TECHNICAL: < 600ms Latency

Total decoupling of the Voice Floor and Intelligence Mind. Speculative pre-drafting writes Question N+1 while the candidate is still speaking. Smart barge-in handles interruptions in <120ms.

02 | FINANCIAL: \$0.10 Per Interview

Pure edge-native API architecture (Deepgram + ElevenLabs + Groq). Achieves a 75x cost advantage over 3D avatar bots (\$7.50/call) that require unsustainable cloud GPU rendering.

03 | OPERATIONAL: 100% Browser-Native

Zero candidate installations. Zero kernel-level drivers. Computer vision (gaze tracking) runs entirely locally via MediaPipe WASM, eliminating video cloud storage costs and privacy risks.

04. TARGET AUDIENCE

Enterprise Tech Recruiters & Talent Leaders

Cut early-stage screening time by 80%. Replace unexplainable AI scores with audit-defensible dossiers of **verifiable audio receipts**.

High-Volume University Placement Cells

Screen **5,000+ graduates** in a single weekend for less than \$500, guaranteeing consistent, bias-free technical baseline evaluations.

Engineering Candidates (Practice Mode)

High-fidelity, zero-anxiety mock interviews that yield actionable Growth Dossiers, highlighting exactly where a technical explanation was superficial.

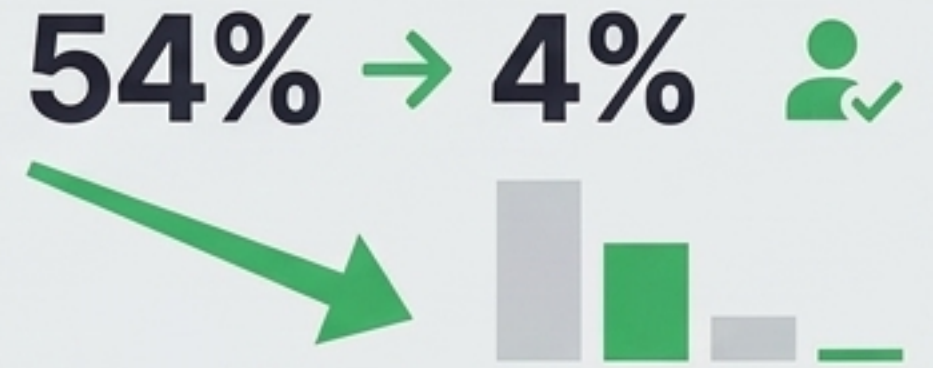

05. IMPACT

The End of the Black Box

By replacing cold monologues with low-latency Socratic dialogue, Verity achieves complete regulatory compliance (NYC Local Law 144 / EU AI Act) while resto-restoring candidate dignity.

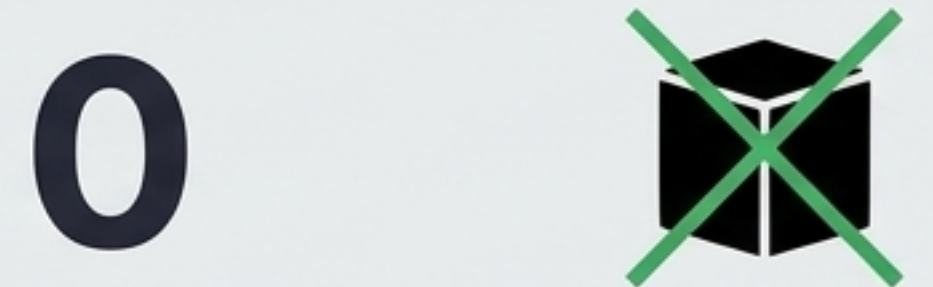

Reduction in recruiter manual screening hours

Drop in candidate screening abandonment rate

Traceable hiring decisions backed by audio receipts

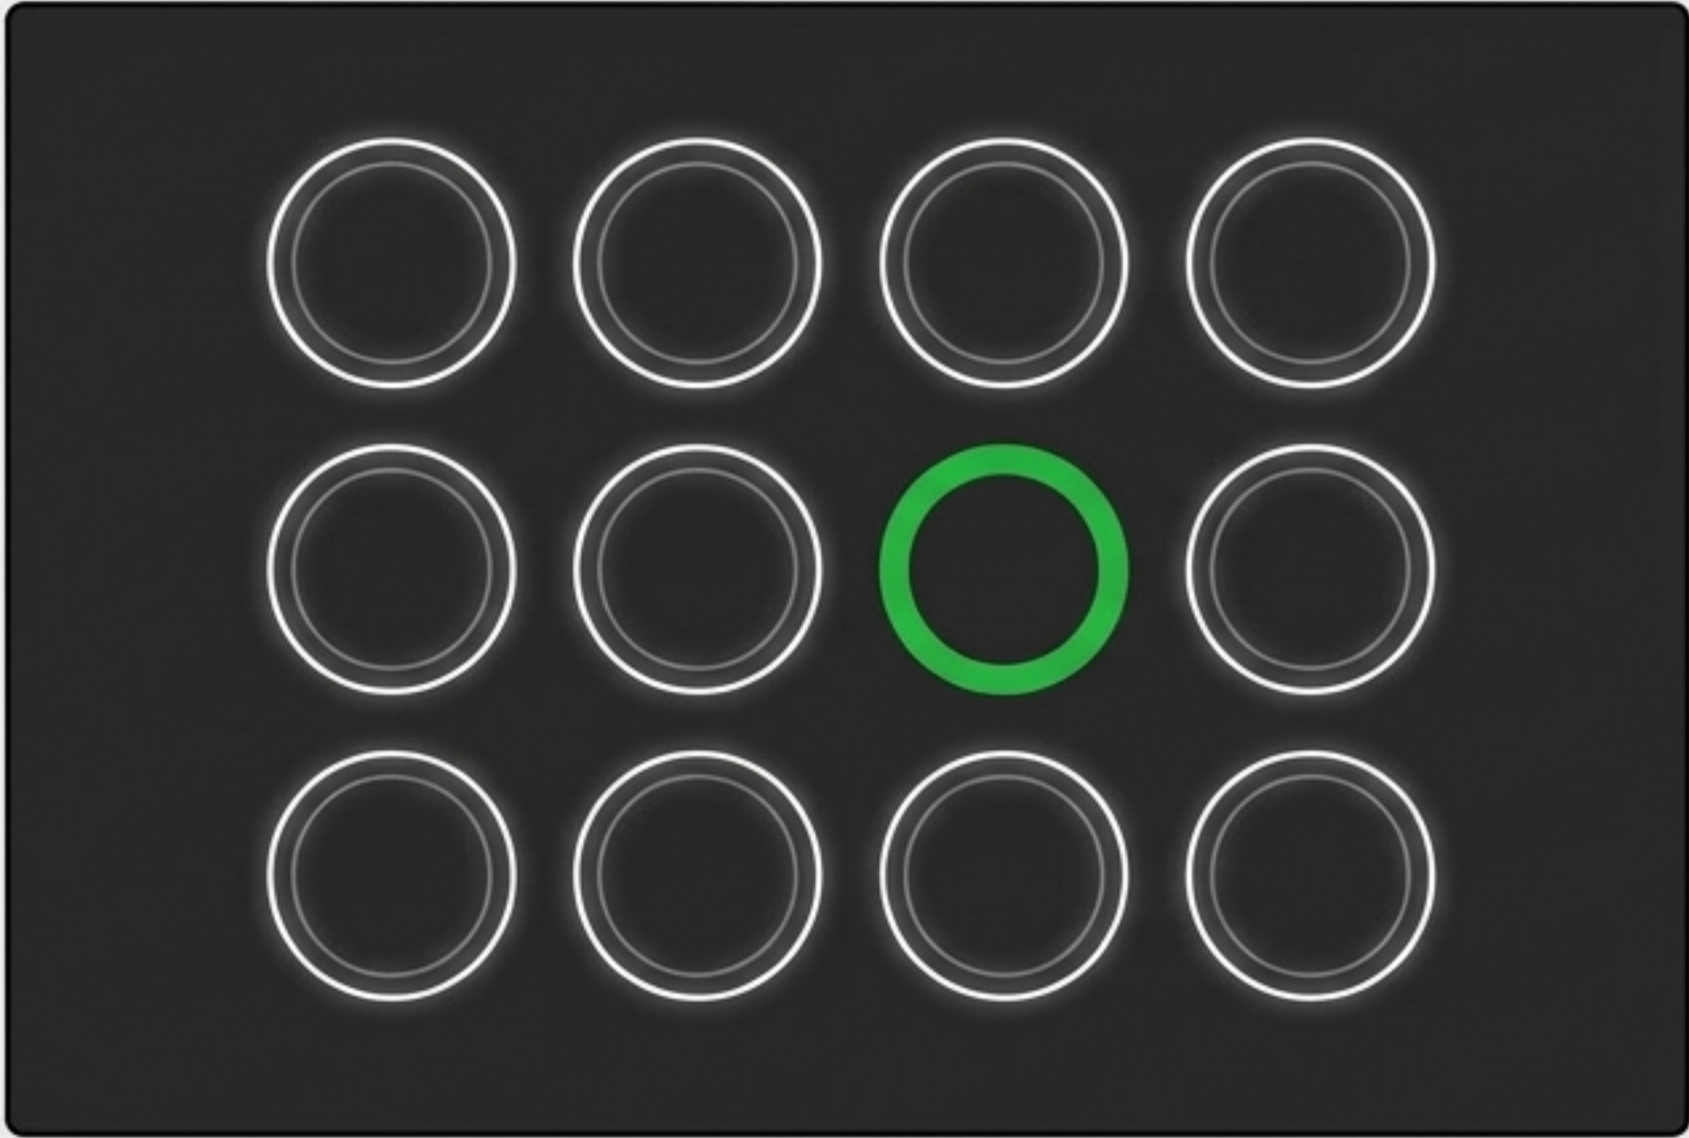

Arbitrary black-box AI match scores generated

06. NOVELTY & INNOVATION

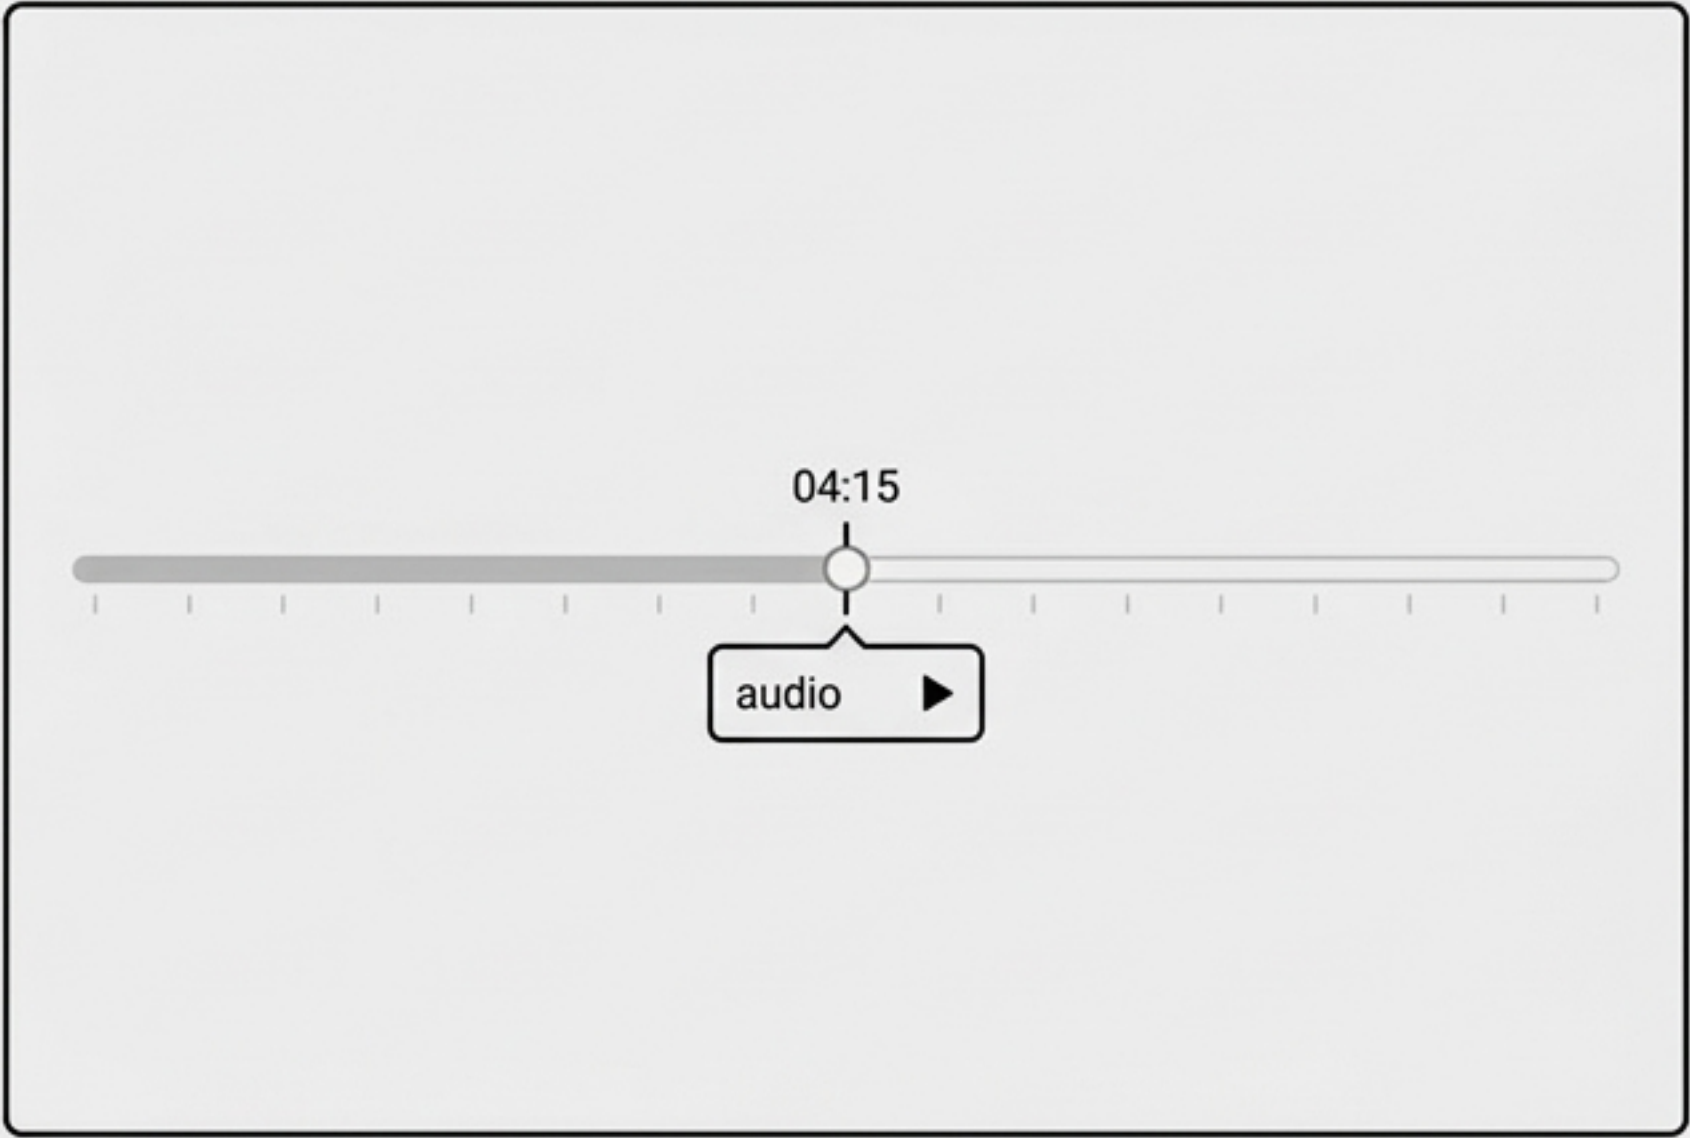

Live Voice Demo remains on Website. MCP enables text-based investigation for all agents

The Calm Voice Canvas

Zero uncanny 3D avatars. A minimalist OLED-dark canvas featuring up to 12 active Case Rings. The UI reacts dynamically mid-sentence, locking solid green upon speech completion.

The Recruiter Dossier

Interactive Time Scrubber. Recruiters can slide back to minute 04:15, view the exact state of the belief rings, and click a Receipt to play a synchronized 12-second audio snippet of the candidate's explanation.
